

Advanced Javascript Development

Lab Exercise 6

1. Why is XML important in programming?

2. The XMLHttpRequest object is used to initiate HTTP requests from remote servers. How would you complete the following code to get the file named note.xml?

```
If (window.XMLHttpRequest) {  
    Xmlhttp=new XMLHttpRequest();  
}  
else {  
    xmlhttp=new ActiveXObject("Microsoft .XMLHTTP");  
}  
Xmlhttp.open (...);  
...
```

3. In XML, can you tell the difference between a tag and an attribute for a specific element x ?

```
<bookstore>
<book category="CHILDREN">
...
</book>

<book category="ACTION"...>...</book>

</bookstore>
```

4. What method is used to remove a child? What method is used to remove an attribute?
